Case Study IDM 232
Joey McQuillan (jam949)

Hero Image

The Overview

I had made a build of a recipe website, created it in html, then making the inner workings of it with php, and making a functional search bar that would give a basic

Context and Challenge

I had to make a recipe website with php, and have a functional php my admin database to store information

Process and Insight

The overall mountain of work and processes for making a recipie website comprised of php was a task, but also not having weekly homework dedicated to the teachings of each lecture made it more difficult to understand and execute php, the many errors that come from using code in general, like misspelling commands, misspelling recipe, having multiple unexplained errors, etc.

The Solution

The Results

I think the Project itself was an average execution of what I've learned from the class, with learning and understanding the makings of a php website all down to watching and re-watching the lectures instead of a weekly homework assignment that would keep the memory of php code retained in my mind more.
